The bottom of the page shows a pagination bar indicating 'Showing 1 to 2 of 2 entries'.

2.

**Data Visualization**

Data Visualization is the presentation of data in graphical format. It helps people understand the significance of data by summarizing and presenting huge amount of data in a simple and easy-to-understand format and helps communicate information clearly and effectively.

To get a little overview here are a few popular plotting libraries:

- **Matplotlib:** low level, provides lots of freedom
- **Pandas Visualization:** easy to use interface, built on Matplotlib
- **Seaborn:** high-level interface, great default styles
- **ggplot:** based on R's ggplot2, uses Grammar of Graphics
- **Plotly:** can create interactive plots

**Importing Datasets**

Importing dataset or load the dataset using pandas read\_csv method.

**Example:**

```
import pandas as pd
iris = pd.read_csv('iris.csv', names=['sepal_length', 'sepal_width', 'petal_length', 'petal_width', 'class'])
```

**UNIT 3: Testing Tools and Environments**

**1. Selenium - Web Automation Tool**

Selenium is a popular, open-source tool used for automating web browsers. It allows testers to simulate user actions like clicking buttons, entering text, and navigating pages.

Selenium WebDriver is a core component of the Selenium framework, providing the interface for automating web browsers. It allows developers to write test scripts using various programming languages and interact with web elements, enabling end-to-end testing and automation of web applications. Selenium WebDriver enables cross-browser testing, allowing tests to be run on different browsers and operating systems simultaneously.
