CIRCULAR FOR ADVANCED LEARNERS' ENRICHMENT PROGRAM

Batch : 2023-24 (1st year)

Date: 01/07/24

This is to inform all students that the 2023-2024 Advanced Learners' Enrichment Program will commence on 08/07/24 , for students identified as advanced learners based on their overall performance.

Key activities will include:

- Workshops on emerging trends in Ayurveda, such as ancient therapy and advanced rehabilitation techniques.
- Case presentations where students will critically analyse complex rehabilitation scenarios.
- Mentorship sessions on professional certification and preparation for competitive exams.
- Presentation at Ayurveda class room, offering students the chance to present their work.

The program will continue until 24/07/24, and attendance is required for all selected learners.

PRESENTATION

PRESENTATION

PRESENTATION

DIFFUSION OF CARBON DIOXIDE

- Diffusion of Carbon Dioxide from Blood into Alveoli
- Partial pressure of carbon dioxide in alveoli is 40 mm Hg whereas in the blood it is 46 mm Hg. Pressure gradient of 6 mm Hg is responsible for the diffusion of carbon dioxide from blood into the alveoli.
- Diffusion of Carbon Dioxide from Alveoli into Atmospheric Air
- In atmospheric air, partial pressure of carbon dioxide is insignificant and is only about 0.3 mm Hg whereas, in the alveoli it is 40 mm Hg. So, carbon dioxide enters passes to atmosphere from alveoli easily.

PRESENTATION

TRANSPORT OF OXYGEN

- Oxygen is transported from alveoli to the tissue by blood in two forms: 1. As simple physical solution 2. In combination with hemoglobin.
- AS SIMPLE SOLUTION
- Oxygen dissolves in water of plasma and is transported in this physical form. Amount of oxygen transported in this way is very negligible. It is only 0.3 mL/100 mL of plasma.
- It forms only about 3% of total oxygen in blood. It is because of poor solubility of oxygen in water content of plasma. Still, transport of oxygen in this form becomes important during the conditions like muscular exercise to meet the excess demand of oxygen by the tissues.

PRESENTATION

PRACTICAL PRESENTATION

- TYPES OF RESPIRATION Respiration is classified into two types:
 1. External respiration that involves exchange of respiratory gases, i.e. oxygen and carbon dioxide between lungs and blood .
 2. Internal respiration, which involves exchange of gases between blood and tissues.
- PHASES OF RESPIRATION Respiration occurs in two phases:
 1. Inspiration during which air enters the lungs from atmosphere
 2. Expiration during which air leaves the lungs.
